DONBASENERGO'S Environmental Policy

Donbasenergo is a company that combines into a single economic block electricity and heat producing thermal power plants with auxiliary enterprises supporting the operations of the core production.

For the implementation of its Environmental Policy, DONBASENERGO:

1. Ensures functioning and improvement of the environmental management system as the key tool for management of its environmental aspects, risks and opportunities, makes regular assessment of its performance efficiency.
2. Ensures adherence to mandatory environmental requirements that the Company committed itself to.
3. Cooperates and takes into account opinions and interests of stakeholders in the field of environmental protection.
4. Consistently improves infrastructure and processes functioning in the Company with the aim to reduce emissions, discharge of pollutants, generation of waste as well as consumption of natural resources.
5. Carries out preventive measures to prevent negative environmental impact, which means prioritizing preventive efforts over steps to eliminate consequences of such impact.
6. Ensures involvement and motivation of the Company's employees in efforts to reduce the environmental impact, to improve the environmental management system and environmental performance indicators on a continuous basis.
7. Raises competence and awareness of the role of the Company's employees in solving environmental issues.

The Company's management commits itself to the implementation of the Policy, bringing it to the attention of the staff and the public, ensuring the availability of resources necessary for the effective and efficient functioning of the Environmental Management System.
